

# Size and Fit Guide

To determine your chemisette size, measure the distance between your bra straps, from one **outer** edge to the other **outer** edge (photo 1). If you find your measurement falls right on the line of two sizes, go with the smaller size. Using the example below, the measurement is 11 inches, so she would buy a large.

## Measurement between straps.

## Chemisette Size

8 to 9.25 inches	small
9.25 to 10.5 inches	medium
10.5 to 12 inches	large
12+ inches	X-large

The elastic band that loops around the button stretches to allow the chemisette to fit various sizes. The outer edges of the chemisette should not go on top of or outside the outer edge of the bra strap or it may not stay attached and may not lay flat.(photo 2).

The three photos below help to demonstrate the difference between the three sizes.

- 1) Too small - It pulls the bra straps in and the elastic will not stretch far enough. (pic 3)
- 2) Correct size - It lays flat and smooth without altering how the bra straps lay. (pic 4)
- 3) Too large - You may need to double loop the elastic to get it to stay and it may not lay flat. (pic 5)
